DesignCAD

The Easy to Use CAD System.

WHAT IS DesignCAD?

DesignCAD is a Computer Aided Design system - it is a tool for design much like a word processor is a tool for writing. It is used by Engineers, Architects, Artists - anybody who makes drawings. DesignCAD is also excellent for presentation graphics and technical illustration. DesignCAD is the CAD system that anybody can use. It won't cost you an arm and a leg, but it will perform like it did.

WHY SHOULD YOU GET DesignCAD?

1. DesignCAD is extremely easy to use. You won't have to spend weeks learning simple functions.
2. DesignCAD works with the hardware YOU own. DesignCAD supports most printers and plotters available for the IBM PC, as well as a wide variety of graphics adapters, digitizers, and mouse devices.
3. DesignCAD can produce plotter quality output on an ordinary dot matrix printer. (Many of the drawings in this book were printed on an ordinary $299 dot matrix printer!)
4. DesignCAD drawings are compatible with most other CAD systems, Desktop Publishing systems, and many other graphics packages.
5. DesignCAD is priced 70% to 80% BELOW comparable CAD packages. At $299, you can't go wrong!

Remember, DesignCAD only costs less - it doesn't do less.

WHAT DO I GET FOR $299? WHAT ELSE DO I NEED TO BUY?

For $299, you get it all. There are no "additional charges". DesignCAD, at $299, includes:

1. The complete CAD system, including every command and option.
2. Support for more than 200 printers at high resolution, more than 80 plotters, most mice and digitizers, and most graphics adapters.
3. File transfer utilities to move drawings to and from:
   - IGES - The National CAD Standard.
   - DXF - AutoCAD's interchange format.
   - HPGL - HP Plotter Language. This means that DesignCAD can read any drawing produced for an HP Plotter!
4. The capability to read text files. This means you can take an ASCII file from your word processor and incorporate it into your drawing.
5. The capability to read files of X - Y coordinates.
6. Compatibility with most desktop publishing systems.
7. Materials List program, used to make an automatic bill of materials.
8. Symbol libraries containing more than 500 symbols.
9. Several other utility programs.

WHAT IS THE DIFFERENCE BETWEEN DesignCAD AND ProDesign II?

DesignCAD is actually the latest version of ProDesign II. With version 3.0, we have changed the name to DesignCAD and added more than 100 new features.

WHAT DO I NEED TO RUN DesignCAD?

1. IBM PC/XT/AT/PC2 or compatible.
2. A printer or plotter.

HOW MUCH DOES IT COST?

ONLY $299
